aftermarket?

Engine?
Brakes?
Shocks?
Clutch?

- 4. What special features or options does it have?
- 5. Any aftermarket parts on the car?
- 6. Why are you selling it?
- 7. How long have you owned it? ...had it for sale?
- 8. Is it currently registered and licensed?
- 9. Where is the car located?
- 10. Is it a US or European Car?
- 11 If European, do you have original DOT/EPA paperwork?
- 12. What problems have you had with the car?
- 13. What gas mileage have you been getting?
- 14. Has it ever been hit or in an accident?
- 15. Has the car been raced or had track time?
- 16. Any major components been replaced?
- 17. Has there been any Warranty work done?
- 18. What work remains to be done or corrected?
- 19. Are there any missing parts?
- 20. Do you have any extra parts or wheels for it?
- 21. Are you the Original Owner?
- 22. Is there a traceable ownership history on the car.
- 23. Can the previous owner(s) be contacted?
- 24. Is there a complete service history on the car?
- 25. Who was your mechanic? name/address/phone?
- 26. Are there any repair or gas mileage records?
- 27. Oil change interval? Type of oil?
- 28. May I bring the car to a place where it can be put in the air for inspection?
- 29. Has it passed emissions recently?
- 30. Any interesting history?
- 31. What's the least you're willing to take for it?
- 32. Additional questions...

At this point you might want to schedule an appointment to see the car yourself or have it inspected by a third party. In the interim you may want to have the seller fax or send copies of certain records such as the title (both sides) and verification of major services / repairs? If the seller hesitates or insists on a deposit first be wary.

FOLLOWUP QUESTIONS TO ASK YOURSELF AFTER YOU'VE HUNG UP THE PHONE:

What's your gut reaction?

Does this car seem like a possibility?

Does the current owner seem like he cared for the car?

Why am I interested in buying "this" car?

Am I willing to pay a premium because someone else has already done most of the serious work on the car?

or

Is this a car I can buy cheap and put some sweat equity into? What is the most that I'm willing to pay for this car?

TAKING THE NEXT STEP: CHECKING OUT YOUR DREAM CAR WHILE KEEPING YOUR HEAD

It can be said that owning a Pantera is not a logical decision, but one of emotion. Nonetheless buying a Pantera (especially your first) with your heart overriding your head can lead to a less than enjoyable experience in the long run. Here's a LOGICAL checklist and some suggestions on how to go about evaluating a Pantera without letting emotions get in the way. Remember: patience is a virtue and is often rewarded. If this isn't the car, there will be another and don't forget the age-old caveat: If it sounds too good to be true...!

SUGGESTIONS:

- 1. Read some of the "How to buy Used Cars" books available at your library. They provide useful strategies and cautions that go far beyond the scope of this list. Also, review this list carefully before using it. Also check out as much about the model Pantera as you can thru books, past magazine road tests, and general knowledge of owners you talk with online, at Pantera events or info you gather in searching for your Pantera.
- 2. Always inspect/take delivery of the vehicle in broad daylight, never in the evening/night or in the rain.
- 3. A clean piece of cardboard placed under the engine/trans after the test-drive will help show fluid leaks.
- 4. In some states, older non-titled vehicles may be titled with just a bill of sale. Other states may require an additional security bond to be posted. Use extreme caution in either of these cases! Make sure title is not marked "SALVAGE" or "TMU" True Mileage Unknown
- 5. Require seller have the vehicle pass all state inspections (safety, emissions) at a mutually agreeable shop (NOT one of his choosing) before you pay for it. Old (>30days) inspections are of absolutely no use to you.
- 6. A general guide to reading exhaust smoke:

Black smoke = unburned fuel

Valves bad or out of adjustment? Carb out of adjustment? Blue smoke = burning oil

Accelerating: Piston rings bad? Decelerating: Valve seats/guides bad? White smoke = burning coolant!

Bad head gasket? Warped or cracked Head or Block? \$\$

PART 1. MECHNICAL INSPECTION CHECKLIST TOOLS TO BRING FOR INSPECTION:

Essentials: A cynical, mechanically minded friend, Your standard tool set, Voltmeter, Compression Gauge, Tire gauge, Flashlight, Magnet, the 2 different spark plug sockets, spray lube, clean rags Clipboard, pen and hi-liter to use with a photocopy of this list, some cash, drivers license and copy of your insurance showing you are covered driving the sellers car.

Optional: tow rope, starting fluid, jumper cables, timing light, ramps, jack (floor or scissors), mirror, coveralls, rags, gas can, oil, duct tape, wire, repair manuals, misc. fuses, calculator

PART 2. EXTERIOR AND INTERIOR INSPECTION. (Don't start the engine yet)

Oil gauge works? Charge warning light goes out?	OK	
Charge warning light goes out?		
		Do all idiot lights go on/out right?

	Are all other instruments working?
	Does it start easily when cold?
	Does it run smoothly when cold?
	Depress clutch several times. Noises?
	Oil Pressure: idle 4000 RPM
	Volts/Amps: idle 4000 RPM
	Exhaust condition/noises? Pressure even?
	Cap pipe with clipboard. Any exhaust leaks?
	Any deposits on clipboard? Does it smoke?
	Turn car off. Does it restart? Restart again.
	Now pull forward. Check for leaks on ground.
	Do you have any gas? Does gauge really work?
TEST DRIV	E (Allow 30-40 minutes)
OK Not-O	K
	Test the foot and hand brakes first!
	Relax, drive a bit to get used to it.
	How does car ride? Soft or hard?
	Revs smoothly to red line? flatspots?
	Any unusual engine noises/vibrations?
	Any drive train noises or vibrations?
	Any noticeable slop in drive train?
	Reverse works? Rev. lights go on/off?
	Overdrive engages/disengages properly?
	Turbo ongagos /disongagos proporty?
	Any clunks, whines, rumbles, rattles?
	Clutch smooth? Slippage on hill test?
	Hand brake works? Test against engine.
	Is low engine speed operation OK?
	Do brakes still work? Stops straight?
	Make 2 tight 360' turns each way. Any noises?
	Accelerates smoothly from dead stop?
	Are there any hesitations/flat spots?
	Does the power seem right? Hill test.
	Is it running too hot or cold? Why?
	Drive beside a long wall. Any unusual sounds?
	Is it too noisy in general at highway speeds?
	Any noises or vibrations when accelerating?
	Any noises or vibrations when coasting?
	Any noises or vibrations when decelerating?
	Any noises or vibrations when braking?
	Steering action loose or tight? Parallel park.
	Handles OK on bumps, curves and sharp corners?
	Bad understeer, oversteer, lean?
	Tracks straight with hands off steering wheel?
	Brakes straight with hands off steering wheel?
	Brakes still work? Pulls? Pulse? Drag? Noises?
	Having fun yet? Comfortable? Does it fit you?
	Do the heater, defroster and AC work right?
	Are all the instruments and lights still working?
	Now let it idle a while. Is temp stable/OK?
	Any exhaust, gas or coolant odors? Pull forward.

Turn it off. Go back to check ground for leaks.
Have friend get out and watch the car driving or ideally have him follow behind:
OK Not-OK
Tracks straight? (Frame bent?)
Smokes? Wheels wobble? Any noises? Leans? General impression?
Leans? General impression?
POST DRIVE:
OK Not-OK
Open hood. See or hear anything unusual? Does engine seem too hot?
Check for fluid leaks after shutdown. (Oil, Coolant,
Hydraulics, Trans, Fuel, Differential) Check oil cap and dipstick for signs of water. (Oil off-color,
brown/grey/white or bubbly)
For the truly paranoid:
OK Not-OK
Compression test: (disconnect coil, remove ALL plugs)
1. Dry:
1 2 3 4 5 6 7 8
2. Oiled:
1 2 3 4 5 6 7 8
3. Plug condition? (OK? Burnt? Oily? Sooty?)
1 2 3 4 5 6 7 8
Does it restart when warm? Why not?
COMMENTS:
